100 Performance Bulls Thursday, May 6th

Hazeldean, Cooma, NSW

2021

**HAZELDEAN**  
LITCHFIELD  
EST 1865

## Hazeldean Autumn Bull Sale 2020

*We welcome you to our 2021 Autumn Bull Sale. Our catalogue is comprehensive and detailed providing you with as much detail as possible to aid your selection. Photos and videos will be available on AuctionsPlus and inspections welcome at any time.*

- ★ Free delivery
- ★ Super sound; featuring sons of Hazeldean Magnum
- ★ Superior carcass and fertility
- ★ Excellent temperaments

**We will have a catch up dinner at the Alpine hotel in Cooma the night before the sale from 6.30pm. Please contact Jenni for bookings 0264535555**

# Hazeldean Autumn Bull Sale 21

Thursday 6th May

Hazeldean, Cooma NSW  
Commencing at 1pm

# 100 Performance Bulls

Inspection from 10.30am on sale day

Account: Hazeldean Pty Ltd  
ACN 000 012 760  
ABN 33 000 012 760

## Enquiries:

Ed Bradley: 0412 298 546

Bea Bradley Litchfield: 0427 933 103

Hazeldean Office: 02 6453 5555

admin@hazeldean.com.au

## Selling Agents:

### Nutrien Stud Stock

Tim Woodham 0436 015 115

Damo Roach 0427 253 250

## Bull Deliveries

Hazeldean offers free delivery to all parts of NSW and VIC. Outside these states we will get your bull to the nearest major centre.

## Catering

Lunch will be available prior to sale courtesy Cooma Pony Club. Please stay on for refreshments after the sale.

## Agent Rebate

A 2% rebate is offered to outside agents attending the sale to introduce and assist buyers.

To qualify, agents must:

- Introduce the client by email 12 hours prior to the sale;
- attend the sale with the client

## Phone Bidding

Tim Woodham 0436 015 115

**Sale will be interfaced with AuctionsPlus.**

**Videos & photos on-line 10 days prior to sale plus final weights at:**

**[www.hazeldean.com.au](http://www.hazeldean.com.au) & [www.auctionsplus.com.au](http://www.auctionsplus.com.au)**

**Register on-line prior to the sale @ [www.hazeldean.com.au](http://www.hazeldean.com.au)  
and we will have your bid card ready for you on the day**

## Sale Day Safety

**Visitors enter the pens at their own risk. Children under 16 years are not permitted to enter the pens unless supervised at all times.**

All care is taken to ensure livestock pose minimum threat to us and our clients. However, we cannot predict nor guarantee their behaviour. All sale bulls have been assessed for temperament and are quiet to handle under normal circumstances. Sale day places bulls under stresses that are foreign to their normal routine. They are not used to having a crowd of people around them and so the behaviour of even the quietest bull under normal circumstances can be unpredictable. Bulls may also fight in the pens and at these times they are oblivious to people who may be in their way. Do not put pressure on the bulls in the yards and do not enter the yards unless you need to. If you would like assistance with inspections, please ask any Hazeldean staff member or agent assisting with the sale.

**Be sure of a catalogue – Bring this one with you**

**Disclaimer** All reasonable care has been taken to ensure the information in this catalogue is correct at time of publication. The vendor makes no other representations about the accuracy, reliability or completeness of the information provided and does not assume any responsibility for the use or interpretation of the information.

## Welcome

---

Dear Angus Breeders,

We have often discussed the importance of reproduction in a beef cattle business and have said in the past beef producers are not so much in the beef business but in the reproduction business. Reproduction is so vital it overrides everything else when you look at profitability. It's worth mentioning again.

Two recent articles have appeared in the rural media recently. One in the Mackinnon Project newsletter regarding calving and post calving loss and the other on Beef Central about conception rates in heifers and mature cows. I will attempt to paraphrase and condense both. The story on Beef Central reported on the MLA MeatUp forum in Adelaide which covered some of the issues that influence conception and re-breeding and the work undertaken by Professor Wayne Pitchford of Adelaide University. Work done some time ago clearly showed a positive correlation between EBVs for fat and conception rates in heifers and cows. The females with higher fat EBVs got in calf earlier and more consistently. Professor Pitchford expanded on this information to suggest producers should be looking at the Days to Calving EBV as this includes fat and weight EBVs in its calculation and therefore provides a better indicator of puberty and hence earlier breeding capacity in heifers as well as rebreeding of heifers after their first calf. This 'flow on' to the second calf is important as it is a notoriously important milestone for any beef female to achieve. Selecting on a greater Days to Calving EBV gives a higher probability of producing females that will rebreed after the first calf is born at 2 to calve again at 3.

The article in the Mackinnon newsletter was about neonatal loss which refers to calf death from calving until one month post calving. The work is also funded by MLA and undertaken by Carolina Munoz of the University of Melbourne. Staggeringly, calf death from calving to one month of age is on average between 5 to 7% nationally and can be as high as 40%. In southern Australia it has been estimated when under good nutrition and management, weaning percentages in heifers should be 92% and in older cows 95% however the current 'branding' rate is around 86%. Major causes of neonatal losses include dystocia, mismothering and scours. Less common causes include respiratory diseases, predation, trace element deficiency, genetic conditions, and environmental factors including extreme heat or cold. It is estimated in southern Australia one third of calf losses occur within the first month of life with most occurring before the end of the first week.

Strategies to minimise neonatal calf loss include selecting for calving ease to minimise dystocia and good management to ensure cows and heifers are healthy pre calving for calves to receive adequate colostrum. Selection of calving paddocks and time of calving to minimise exposure risk to both excessive heat and cold is also important as is management to ensure calf scours and other infectious disease risk is minimised.

Reproduction will always be one of the key focal points of the Hazeldean program and while genetics is only part of the answer it is important to be aware of the other issues that influence this vital area.

All the best for 2021,

The Hazeldean Team

## Proven Genetic Performance

### **SELECT from a herd bred under commercial conditions.**

Hazeldean cattle are bred under commercial conditions and share their paddocks with sheep. The main breeding herd is located in the foothills of the Snowy Mountains with long cold winters, severe frost and a late spring. Hazeldean females are expected to re-breed before the Spring flush and as such are selected for high fertility under low nutrition levels. They are well-known for their hardiness and ability to thrive. Their hardiness suits northern conditions also where animals must work in the heat and be capable of storing energy quickly as body fat and not fall in a heap after calving. With experience in the south and the north we know these are the sort of cattle that will perform in both environments.

### **INVEST in a cow herd with TRUE depth of breeding**

The bulls bred at Hazeldean come from a 3500 strong female herd with unequalled depth of breeding spanning 60 years. Hazeldean cattle breed true to type and reflect their breeding heritage with uniform high performing calves that achieve premiums in all markets.

### **BOOST your herd's fertility**

Hazeldean Angus are renowned for high fertility, and good mothering to give consistent and superior reproductive performance. Selection pressure on females to breed a live calf every year from 2 years of age is strict and any female who fails to do so for any reason is "out".

### **ACHIEVE higher prices at the saleyards.**

Hazeldean blood animals command higher prices at market and are sought after by feedlotter and backgrounders.

## Hazeldean Breeding and Management

Established in 1927, Hazeldean Angus is part of Hazeldean Pty Ltd, a pastoral enterprise owned and operated by the Litchfield family of Cooma, NSW since 1865. Hazeldean provides the beef industry with large numbers of high quality, high performing stud and commercial Angus bulls. Seedstock and commercial beef production has been Hazeldean's business for over 150 years. The company understands genetics and what's important to run a successful commercial beef cattle operation.

The Hazeldean herd consists of 3500 commercial, APR and stud cattle, which are bred and grazed on the Monaro in southern NSW. Hazeldean cattle are renowned as being "good doing", hardy cattle that will thrive in any climate. The female herd has a reputation of exceptional fertility, lower than average birth weights, excellent calving ease, teamed with high growth and above average carcass.

Hazeldean's core business is providing functional, profitable bulls to the commercial beef industry and this means first of all maximizing the number of pregnancies and the number of live calves hitting the ground, building on that base rapid growth rates and on top of that superior carcass data. This is the basis of any successful breeding enterprise.

Hazeldean selects for quiet temperament in their breeding program and sire selection and their cattle have an enviable reputation of being exceptionally quiet and easy to manage. This shows in the docility EBV's of Hazeldean cattle. Temperament is highly heritable, it affects carcass quality, growth rate, and handling – any animal that shows bad temperament is culled.

### Stud & Performance History

The Hazeldean Angus herd was established in 1927, replacing a herd of primarily shorthorn cattle that had run on the property for many years. In 1952 the stud was founded with the purchase of in-calf heifers from six New Zealand studs. These heifers were specially selected for scale, length and docile temperament – traits that still remain important to the stud 60 years later. As the commercial herd was of a very high standard and as a means to fully utilize the foundation sire "Wallah Ottoman", a selection of top grade commercial females were selected to join the bull-producing herd. The strength of the Hazeldean herd has always been its ability to produce large numbers of high performing bulls with emphasis always on commercial reality.

In 1960 Hazeldean became one of the first beef seedstock producers anywhere in the world to embrace the concept of Performance testing and has continued to use accurate measured production in its selection and breeding programmes ever since. Hazeldean was the first beef herd in Australia to trial Breedplan and was later chosen as the site of the national launch in 1985. Hazeldean Angus is involved in carcass and feedlot performance trials and sire progeny testing programmes to identify the leading sires for profitability to the industry.

**Bull Sales** Around 400 bulls are sold each year by auction at selling centres located at "Hazeldean", Cooma, NSW (May & Sept), Drillham QLD (August) and Tamworth, NSW (August).

**Female Sales** Commercial females and select registered females are sold on-property at Hazeldean's annual Female Sale in Cooma in May depending on season.

**Semen Sales** Semen is available from Hazeldean's top sires. Contact Hazeldean or view our website [www.hazeldean.com.au](http://www.hazeldean.com.au)

## Hazeldean Breeding and Management

---

### Management & Breeding Programme

The Hazeldean properties are extensive grazing properties suited to commercial beef production. The Hazeldean herd is run under strict commercial conditions with stud cows sharing their paddocks with sheep and only receiving supplementary feeding in drought. Hazeldean sources the most proven and high performing Angus sires and multiplies these genetics throughout the herd using their comprehensive (AI) and (ET) programme. Elite Hazeldean cows are flushed and used as donors in the ET programme.

The provision of bulls by a seedstock breeder to a commercial breeder must do five things. They are, in order of importance, as follows:

1. Serve cows effectively and efficiently so that the number of pregnancies in your herd is as high as it can be over a 6 week joining.
2. Produce daughters that are fertile at an early age, able to calve unassisted at 2 years of age and breed back every year thereafter.
3. Sire calves that grow quickly to reach maximum liveweight at the turnoff time targeted by the breeder.
4. Have sufficient constitution and athleticism to survive and breed effectively for a number of years.
5. Sire calves with valuable carcasses that maximise returns to the breeder and the processor for each kilogram of beef produced.

It is vital that these targets are met in this order for beef producers to make money out of beef cattle and this is the focus of the Hazeldean program.

# HAZELDEAN QUALITY ASSURANCE

*Hazeldean bulls are meticulously measured for all traits with all data submitted to AA to produce Estimated Breeding Values.*

All Hazeldean Bulls in this catalogue are:

- Weighed & tagged at birth
- Calving ease & gestation length data submitted to AA
- Weighed at 200, 400 & 600 days, plus a final pre-sale weight
- Sire verified through DNA
- SNP tested at weaning via i50K for production traits
- Independently assessed for structure; feet, legs, sheath, testicles & docility
- Scanned for eye muscle area, intramuscular fat, rib & rump fat
- Prior to sale have been fertility tested via a semen test and testicular palpation
- Vaccinated with 7-in-1, Vibriovax and Pestiguard
- Hazeldean is a JBAS8 herd with eligibility to enter all States

HAZELDEAN

LITCHFIELD

EST 1865

## Purchasing a bull from Hazeldean

**Health Check** All sale bulls are thoroughly assessed by a vet prior to the sale. Animals displaying faults that are likely to interfere with a normal productive life are culled.

The Hazeldean herd has JBAS8 status.  
Bulls are Pestivirus, Vibriosis and 7 in 1 Vaccinated.

**Fertility** Although sale bulls are vet checked immediately prior to sale day, which includes a full examination of reproductive organs, we recommend that you organize a pre-mating bull examination at least 6 weeks prior to joining to ensure that your bulls are in the best of health and capable of producing pregnancies. The procedure should include a serving ability test where the bull is observed serving a cow or heifer.

**Hazeldean has an uncompromising approach to structural assessment** All Hazeldean bulls and females are annually assessed and those failing the assessment are culled. Before cataloguing, each animal is inspected by an independent assessor to ensure a high standard of structural correctness, particularly with regard to conformation, shoulders, legs and feet. (See beef class structural assessment system). Only animals that pass this rigorous inspection are entered for sale. No animal has received treatment to their feet.

**Semen Terms & Conditions** Hazeldean retains semen rights on all bulls unless otherwise agreed upon, according to Hazeldean Semen Terms and Conditions.

See full Terms and Conditions at the back of the catalogue.

## Beef Class Structural Assessment System

**Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability.**

Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on affect of structural improvement throughout all sectors of the beef cattle industry.

Liam Cardile of 'BEEFXCEL' structurally assesses many of the leading seedstock herds in Australia. 'BEEFXCEL' is not involved in any genetic marketing or specific breeding advice and therefore has no conflict of interests to influence their stock appraisal. The integrity of the structural data provided by 'BEEFXCEL' is recognised throughout the industry as Liam is a fully INDEPENDENT assessor.

### Hazeldean Structural Program

The Sale team has been independently structurally assessed to maximise the quality of stock on offer. Any animals deemed inadequate have been removed from the sale draft.

The Hazeldean sale bulls were assessed by Liam Cardile of BEEFXCEL. In addition to annual bull assessments, Hazeldean has recently completed a full female herd assessment program. An ongoing program of assessing first calving females during lactation also helps to further strengthen the structural soundness of the entire Hazeldean breeding herd.

### How to use The Beef Class Structural Assessment System

The Beef Class Structural Assessment System uses a 1- 9 scoring system

- A score of 5 is ideal. (Note: Temperament Score of 1 is preferable)
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of 2 or 8 are low scoring animals and should be looked closely before purchasing.
- A score of 1 or 9 should not be catalogued and are considered culls.

Liam Cardile – Beef Xcel – 0409 572 570

## Looking after your new Hazeldean bull

---

Bulls are like us. Some settle easily in to a new location - others don't. Here are a few pointers to help your new bull/s settle in.

Bulls are social animals and there is a hierarchy within each mob. Usually we have around 4 mobs of bulls for any one sale. If bulls are purchased from different mobs and put together they will very likely fight to sort out who's "boss". If you buy more than one bull, find out from us at the end of the sale what mobs are represented in your purchases and we can tell you whether you are likely to experience fighting when we get them home for you.

When the bull/s arrive at your home, let them settle in by leaving them in the yards overnight and observe how they are reacting to their new home. Give them fresh water and good quality hay. If they are fighting you might have to split them, depending on how serious it is. Two bulls fighting is often less of a concern than 3 bulls fighting as sometimes the third bull will broadside one of the bulls locked in battle and serious injury can result. If you have purchased only one bull, then find a mate or two for him straight away. If you have bought multiple bulls from a number of different management groups or studs it is often better to put them all together at once. Introducing new bulls into a mob one at a time can lead to the new bull being given a very hard time indeed by his contemporaries. Sometimes a young bull will team up with a bigger older bull but often it should be one or two cows or steers. Bulls left on their own are much more likely to jump or push through fences and be unsettled and once they get into the habit are hard to stop.

We do not use dogs on our cattle so your new bull might react strangely if you use a dog. In all instances read the body language of your new bull/s and take appropriate action. Sometimes this might involve a stint in the yards, other times it might be better to let them into a paddock straight away with one or two cows. The added advantage of running them with cows is that it will help them develop immunity to foreign bugs they may not have previously encountered well before the breeding season. Whatever the circumstances, do not take the view that everything will be fine because sometimes it isn't and each bull will be different. For further advice please do not hesitate to call us.

Your new bull will be up to date with vaccine and parasite treatment at the time of sale however a booster vaccination should be given annually including Vibriosis, Pestivirus and 7 in 1. These vaccinations can be given anytime to fit in with your normal management routine however 4 to 6 weeks before mating is a good time and this also gives you a chance to inspect all your bulls and establish their general soundness before the breeding season.

Prior to mating a breeding soundness evaluation of all the bulls you own is a good idea. You may wish to undertake this yourself or get a vet to do it for you. Bulls should be assessed for reproductive soundness including palpation and measuring of the testicles. Testes should be at least 32 cm in circumference and tennis ball firm, not hard or soft. They should be symmetrical and free from abnormal lumps and bumps. The epididymus at the base of the testicle should not be enlarged or irregular and the cords at the top of the testicle also free of lumps. It is a good idea to observe your bull's actual physical prowess in a serving ability test. When a bull is mounting a cow he must thrust and complete a service fully before he can be given a tick. Stand to the right and to the rear of the bull and check for corkscrew penis. Corkscrew penis is a condition where the end of the penis spirals preventing entry into the vagina. Corkscrew penis will always deviate to the right side of the cow. Also check the bull for muscle tremor, muscle wastage, lameness, favouring of one hind leg or any other indication he may be unsound. Look for other indicators - unevenly grown hind toes can be a sign of hip problems for instance.

Once your bulls have passed through all these hoops they are ready for joining however do not think that you can now take your eye off the ball (so to speak) because during joining an injury is even more likely to occur, or a long standing problem resurface, due to the workload. Inspect your bulls twice a week at close proximity. Look for the same things you observed in your pre joining check. When you have passed the first 3 weeks of joining make sure there are not large numbers of cows cycling. Even if your bull is serving well and normally there is always a small risk he may be infertile due to poor quality sperm. This may be a temporary or permanent problem. If you are in any doubt replace the bull with another.

It is important to remember that the fundamental profit driver in a beef enterprise is reproduction. It is therefore vital to spend time making sure your bulls are working properly.

During the non-breeding season DO NOT LET YOUR BULLS GET FAT!! Bulls will last longer, have fewer feet problems and will be more agile and virile generally if they are not overweight. The best mature bull paddock is often your worst paddock. Young bulls may need a better paddock as they are still growing.

At the 6 week pre joining check-up, move all bulls to better paddocks to start lifting them before mating.

If you are in any doubt as to the soundness of your bull/s, or what you should be doing or looking for, please call us.

*Jim Litchfield*

## Understanding EBV's

---

**Group Breedplan analyses the growth and production attributes of beef cattle and provides predictions of the genetic merit of individual animals called Estimated Breeding Values (EBV's).**

Breedplan is logical and straight forward and provides the only solution to the otherwise impossible task of weighing up individual bull performance and adjusting for pedigree and the performance of brothers and sisters. It gives the correct weighting to all available information and then gives a value and accuracy level for each trait measured. The higher the accuracy percentage, the more confidence you can have in the figure. Without any figures selection becomes guess work. EBV's are shown as +ve or -ve differences from the breed base. The average EBV's for traits change over time as the breed makes genetic progress. The breed average EBV's provide a useful benchmark for comparisons of EBV's for individual animals.

The following is a brief explanation of the figures and what to look for. Remember, all the figures are calculated from the animal's individual performance AND the performance of its relatives that have also been measured or weighed. This is important as it improves the accuracy of the predicted performance of the bull you purchase. For example, if the bull you purchased was light for birth weight, yet one of its parents was heavy at birth, there is a fair chance that some of your bull's calves will inherit the grandparent's high birth weight. Breedplan works out the likelihood of this occurring and includes it in the estimated figure. The same applies to all other measured traits.

### **CALVING EASE** **Calving Ease (CE)**

Appears on sires only and is self explanatory to a large extent. CE (DIR) is Calving Ease direct and refers to the amount of calving difficulty you can expect from this bull directly from the cows he is joined to. CE (DTRS) is Calving Ease daughters and refers to the amount of calving difficulty you can expect from his daughters. **A plus figure in both instances is good.**

### **Gestation Length (GL)**

Some cattle have shorter pregnancies than normal and some longer pregnancies. As growth starts from conception, generally a bull with short gestation length EBV will sire smaller calves at birth than one with a longer gestation length EBV. It also means that the cow has more time to recover from calving to get back in calf for next year. **A negative figure here is good.**

### **Birthweight (BWT)**

Birthweight generally applies mostly to those looking for a heifer bull. Generally at Hazeldean we get a little nervy when we go much above +4.5 for our own heifer joining, although some areas seem to be able to tolerate more birthweight than we can on the Monaro. Even if you are not looking for a heifer bull, keep in mind that a bull with a big birthweight will sire heifer calves and you may run into problems when his daughters calve down. In a well designed program, birthweight EBV should be able to gradually increase as the size of your heifers at 2 years of age increases through selection for improved growth rate.

**A low figure here is good**, especially over heifers, but be careful that it does not get so low that calf mortality starts to increase. Also, you should challenge your heifers to be able to handle higher birthweights, otherwise calving ease will go the wrong way.

### **GROWTH & MATERNAL**

#### **200, 400 & 600 Day Growth**

These figures indicate the sort of weight differences you can expect from the progeny of these bulls (as an average) at 200, 400 and 600 days of age. In other words, if you have two bulls and for 600 Day weight one is +70 and the other is +80, you could expect the bull who is +80 to sire calves that would average 5kgs more bodyweight (as the sire provides half the genes to the calf, that is 10kg divided by 2) at 600 days than the bull who is +70. **A plus figure in all areas is good**, relative to your production, provided birthweight does not get out of control.

#### **Mature Cow Weight**

Provides an estimate of the genetic differences between animals in cow weight at 5 years of age. Obviously smaller cows have less maintenance requirements and those that can still wean heavy calves are valuable however remember there is a high negative correlation between low Mature Cow Weight and growth meaning selection for this trait can put pressure on growth rate of progeny. More efficient "easy-care" cows have a MCW lower than their 600 DWT and we select for this.

## Understanding EBV's

---

### Milk

Milk is the figure that most people find hardest to understand. How can you work out how much milk an animal is capable of producing in its offspring without actually milking them and measuring the quantity? Milk is obviously an important consideration especially for those beef producers turning calves straight off their mothers. Too much of a good thing can lead to udder problems and also result in failure to get back in calf early, especially if a really good milker hits a tight Spring. There are some cows that will milk well and yet still retain enough body condition to start cycling soon after calving. They are obviously very desirable. **A plus figure here is good** but beware of the problems associated with extreme production.

### FERTILITY

#### Scrotal Size (SS)

There is a strong correlation between scrotal size and both male and female fertility. Bulls with big testicles generally sire more fertile daughters. You may notice a discrepancy between scrotal size on sale day and the EBV. This is because testicles, like just about everything else, grow at different rates in different bulls and rankings will therefore change. As with all Breedplan analysis, information on relatives also has an effect. The measurement for the EBV was taken at the same time as we started to program the heifers for their AI program back in early September. The reason we did this was to identify those bulls who failed to reach sexual maturity at the minimum age we want our heifers to be cycling. We cull all bulls who fail to reach a minimum of 30cm at 12 months of age as these animals, if allowed to go through into the sale group, will be more likely to breed heifers who will not get in calf early. **A plus figure here is good.**

#### Days to Calving (DC)

This figure only appears on sires and is an indication of the time taken for his daughters to get back in calf after calving. Some cows take longer to return to their normal heat cycle after calving than others. Those that recover quickly and need fewer days before they get back in calf are obviously more worthwhile having around. **A minus figure here is good.**

### CARCASE

#### Carcase weight (CWT)

Carcase weight refers to the difference you can expect in the weight of this bull's steer progeny when slaughtered at 650 days of age. Remember that this is an EBV and therefore the actual contribution of this trait to the bull's offspring is half of the number published. This is because only half of any animal's genes come from the sire. The other half comes from the mother. **A high figure is good.**

#### Eye Muscle Area (EMA)

This trait is measured by ultrasound when the bulls are approximately 15-18 months old. As muscling is consistent throughout the body, EMA is a good indicator of overall muscle content when the measurement is taken and analysed in the light of total body weight. It is actually impossible to have an animal with more meat in his hindquarter than in his forequarter, or vice versa. Many years ago, Professor Rex Butterfield dissected numerous carcasses from many breeds to prove that as a proportion of total muscle weight, almost exactly the same amounts of muscle were found in various parts of the animal regardless of breed or physical appearance. Despite general opinion to the contrary, it has been recently proven that increased muscle is not linked to poor fertility or calving difficulty. **A plus figure here is good.**

#### Fat Depth – Rib & Rump

Also calculated from ultrasound measurement, high fat depth EBV's will mean bulls that leave fatter carcasses and lower lean meat yield. However, recent research has shown that bulls that are positive for fat generally sire more fertile daughters than those that are negative, all other things being equal. Care has to be taken, therefore, not to select poorer types that lack doing ability and constitution resulting in low fertility. This EBV needs to be kept in balance and **extremes of plus or minus should be avoided.**

#### Retail Beef Yield (RBY%)

This figure is calculated to give you the expected amount of retail beef as a percentage of the total carcass weight in a 300 kg carcass sired by this bull. Again you need to understand that as animals receive half their genes from their mother and half from their father, this figure needs to be divided by two to ascertain just how much is a result of the bull's influence.

## Understanding EBV's

---

### Intramuscular Fat- Marbling (IMF%)

As abattoir data is always slow, there are big benefits in measuring live cattle. The Animal Genetics and Breeding Unit (AGBU) at Armidale with Meat Research has been researching marbling scanning since 1996 and has come up with some very Corporation, CRC and Breed Society support encouraging results for genetic evaluation. IMF% and actual marble score are reasonably well correlated and therefore selection on IMF% will improve marbling. To further improve accuracy, the figure or IMF% calculated by Breedplan also includes abattoir data and overseas EPD data, as well as ultrasound. The US data on marbling is generated purely from abattoir carcase information.

**A plus figure here is good.**

### \$ Index Values

There are currently four selection indexes calculated for animals within the Angus BREEDPLAN analysis. The Angus Breeding Index is a general purpose selection index that is suitable for use in the majority of commercial beef operations, whereas the Domestic, Heavy Grain and Heavy Grass selection indexes are specific to beef operations targeting a defined production system and market endpoint.

**Angus Breeding Index** - estimates the genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. The index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.

**Domestic Index** - estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade, with progeny finished using either grass, grass supplemented by grain or grain finishing systems.

**Heavy Grain Index** - estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.

**Heavy Grass Index** - estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished heavy steers. Further information regarding each selection index is available from [www.angusaustralia.com.au](http://www.angusaustralia.com.au)

**Trial Docility** - This EBV is expressed as the difference in the percentage of progeny that will be scored with acceptable temperament. **Higher scores are more favourable.** For example, a bull with an EBV of +20 would be expected to on average produce 15% more progeny with acceptable temperament than a bull with an EBV of -10.

### Heritability of Traits

Some traits are more likely to be inherited than others. The most **highly heritable traits** (over 35%) are: birthweight, 600 day weight, mature cow weight, scrotal size, rump fat, retail beef yield and docility. Traits of **medium heritability**, (20 -30%) are gestation length, eye muscle area, rib fat and 200 & 400 day weight and those with the **lowest heritability**, (less than 20%) are days to calving, calving ease and milk.

The team at Hazeldean systematically collect as accurately as possible all the required information that is then submitted to Breedplan for analysis. Every calf is tagged and weighed at birth, again at 200 days, 400 days and 600 days. Every animal is scanned for carcase data, all male animals have testicles measured at 400 days and structural and docility assessments are done by an independent assessor (Liam Cardile from BeefXcel).

**Hazeldean F1023 is one of Australia's top proven Marbling Sires. Proven in Cohort 3 of the Angus Sire Benchmarking Program, F1023 is a marbling superstar. With his beautiful smooth skin type, great muscle pattern and super sound structure, Hazeldean F1023 is a sire that ticks a lot of boxes. Hazeldean F1023 has been used heavily in the Hazeldean program we continue to be excited to see his progeny coming through.**

**Hazeldean Jaipur J140 is a standout sire at Hazeldean. He is by Ardrossan Equator A241 out of a great old Hazeldean Renaissance cow, Hazeldean C33. He has been referred to as "the foot fixer" due to his near perfect structural foot scores and general structural integrity. He is also very docile, has excellent fertility EBVs and good birth to 400/600 day growth spread. He is a trait leader for calving ease. We have used him extensively at Hazeldean- he has sired over 270 progeny here.**

**We have been frustrated with many imported Angus AI sires appearing in this country. The lack of breeding depth has resulted in a huge range of phenotypes including issues with temperament and structure. This has encouraged us to use a greater proportion of our own genetics, ensuring the ever important traits of longevity and constitution are maintained within our own and our clients herds.**

Great structure in a high performance bull, good depth of heel to keep feet angle very appealing. Out of nice Docklands cow, her P drop calf was a good sale bull last year.

## Hazeldean Semen Terms & Conditions

---

### Hazeldean retains semen rights on all bulls unless otherwise agreed upon.

- 1 The buyer may use bulls only:
  - To naturally service stock owned by the buyer, or
  - To collect semen for use in stock owned by the buyerAnd will not dispose of, or advertise the disposal of semen or semen rights from any bull to any other party.
- 2 Hazeldean retains the right to collect and market semen from any bull sold either at the buyer's premises or by transporting the bulls to a registered artificial insemination facility on the basis:
  - That Hazeldean will consult with the buyer and ensure that such collection of semen by Hazeldean will take place at a time which will not unreasonably interfere with the use of the bull/s by the buyer
  - Hazeldean will pay all costs of such collection: and
  - Hazeldean will indemnify the buyer in respect of any injury or damage to such bull during the collection process or while the bull is in Hazeldean's possession.
- 3 The semen rights terms bind any successor in title to the buyer, and any person in possession of bulls purchased from Hazeldean.
- 4 The buyer will not dispose of or part with possession of any bull the subject of the semen rights terms unless the party to whom disposal is to be made or to whom possession is to be given first, signs a document accepting the semen terms accrue for the benefit of Hazeldean, and Hazeldean can enforce the semen rights terms.
- 5 The buyer acknowledges:
  - That the physical transfer of bulls from Hazeldean to the buyer is an act that accepts the semen rights terms;
  - That the bulls subject to the semen rights terms are adequately described in the documents of sale, which includes any sale or auction information;
  - That Hazeldean may register the interest created by the semen rights terms pursuant to the Personal Property Securities Act 2009 of the Commonwealth;
  - That Hazeldean may take possession of the bull dealt with in any way that contravenes the semen rights terms;
  - That the buyer, and any successor in title to the buyer and any person to whom the buyer passes possession of the bull will be liable jointly and individually for the reasonable expenses of Hazeldean under the semen rights terms, any reasonable expenses in enforcing those terms.

### Directions to Hazeldean from Cooma

If you are entering Cooma from the Canberra (Eastern) end turn left at the first roundabout in the centre of town by the park. If entering from the Jindabyne (Western) it will be a right turn at the second roundabout. Follow this street, Bombala St, (also the Snowy Mountains Highway to Bega and the South Coast) until you reach a bridge over the Cooma Creek on the outskirts of town. Turn right just before the bridge. The sign says Bobundara 34 and also Church Rd.

Follow this road exactly 14kms from the turn and the Hazeldean mailbox and entrance is on the right - about 1 km past the only bridge you cross on the Bobundara Rd.

### Airports

Hazeldean is located 1.5 hours' drive south of Canberra near Cooma. There are daily flights from all Capital cities to Canberra airport. Hazeldean is 20 minutes from the Snowy Mountains/Cooma Airport which is all weather and has lights. For privately chartered aircraft please contact 02 6452 5999 for more details.
