Hazeldean Spring Merino Ram Sale 2022

We welcome you to our 2022 Spring Ram Sale. Our catalogue is comprehensive and detailed providing you with as much detail as possible to aid your selection. Photos will be available on AuctionsPlus and inspections welcome at any time.

- ★ High indexing, versatile rams; sale team average MP+ in top 10% of SheepGenetics.
- ★ All rams independently assessed for visual traits and fertility tested
- ★ Commercially focused

****OPEN DAY SUNDAY 16TH OCTOBER****

Hazeldean Spring Merino Ram Sale 2022

*** OPEN DAY SUNDAY 16TH OCTOBER***

SALE DAY FRIDAY 21ST OCTOBER

ON PROPERTY HAZELDEAN COOMA

Commencing at 12.30pm

Inspection from 9.30am on sale day

Enquiries:

Ed Bradley: 0412 298 546

Bea Litchfield: 0427 933 103

Ram Deliveries

Hazeldean offers free delivery to all parts of NSW and VIC. Outside these states we will do our best to get your ram to the nearest centre.

Catering

Lunch will be available prior to sale courtesy Cooma Pony Club. Please stay on for refreshments after the sale.

Agent Rebate

A 2% rebate is offered to outside agents attending the sale to introduce and assist buyers.

To qualify, agents must:

- Introduce the client by email 12 hours prior to the sale;
- attend the sale with the client

Sale will be interfaced with AuctionsPlus.

Photos on-line 10 days prior to sale

www.hazeldean.com.au & www.auctionsplus.com.au

**Register on-line prior to the sale @ www.hazeldean.com.au
and we will have your bid card ready for you on the day**

We will have a catch up dinner at the Alpine hotel in Cooma the night before the sale from 6.30pm. Please contact Jenni for bookings 0264535555

Be sure of a catalogue and bring this one with you

Welcome to the 2022 Hazeldean Spring Ram Sale. The line up of rams this year are the best we have produced and we look forward to see them working in your flocks to improve the profitability of your sheep and wool enterprise.

We are encouraged by the many favourable reports we have received on the wool quality of this years rams. It is an economic trait of importance and has been included in our selection protocol for many years. We have seen significant gains in recent years in particular, and it's nice to hear others acknowledging this improvement. Certainly this years extraordinarily wet weather has put some challenges in front of us. We all know Merino sheep prefer nice sunny days with grass no more than around 100 mm high. The overgrown pastures, rainy days, very wet ground and sodden wool of 2022 does not make for happy Merino sheep. The importance of good fleece characteristics is therefore all the more important in years such as this.

We are also encouraged by continuing confirmation a fine wool sheep enterprise is still ahead when profitability is analysed alongside other grazing animals. Rarely in the past has it been any different. Selling 15.6 -16 micron weaner wool at over \$21/kg was a highlight this year for the Hazeldean commercial enterprise. We continue to run over 7500 commercial ewes in the Hazeldean program and are proud to be aligned as commercial wool growers like many of our clients. Through ample chatter in the industry at the moment, shines one key and true profit driver in a Merino enterprise and that is Fibre Diameter. Fine wools are selling very well and we encourage all clients (like ourselves) to continue applying selection pressure for lower micron whilst improving fleeceweight and keeping other important traits in balance.

We do have some industry concerns, nonetheless. The trend towards very large sheep is continuing and gathering momentum in certain areas. There is no need for this and in fact it is counter productive. It is possible to run moderate framed sheep cutting a mountain of high quality fine wool and these are much more profitable on a per hectare basis than large sheep with a high maintenance need.

We love to see our genetics correctly assessed and financially compared to other bloodlines in our industry. We believe there should be more mechanisms to do this. The sheep produced by the Hazeldean program are proven to be on top when it comes to what helps you make a quid.

This is the second year we have included raw scores on conformation, wool and BWR. All sale rams were individually assessed in mid August by Allan Casey for front feet, back feet, hocks, wool colour and character as well as being scored for breech wrinkle at marking last year. This has been very well received along with having the rams fertility checked pre sale by Tom Graham from Coolac vets.

Regards,

Jim & Libby Litchfield, Edward Bradley & Bea Litchfield

The True History of Measurement in the Wool Industry

For those who know Hazeldean and my family they will also know we are committed performance breeders. We have been using measurement in our sheep breeding program since 1954 and see measurement, advances in genetic knowledge and improvements in data processing as a natural 'fit'; a valuable add on and progression to enhance traditional selection methods. What concerns me in this grand old industry of ours is there is still an old guard of traditional sheep classers and breeders who reject completely the idea of using measurement to aid selection, and their views are now more tightly held than ever.

Part of their argument is based upon mistruths that have circulated our industry for years and go along the lines of 'the scientists and bureaucrats forced the processing industry to adopt sale by objective measurement' and 'since sale by objective measurement started, the quality of the Australian wool clip has deteriorated significantly'. Closer to the farm gate they tell us using measurement in sheep breeding automatically means you will lose sight of everything else and your sheep will be unable to reproduce or walk around.

'Whats the point in having a sheep cutting 7 kilos of 17 micron wool if it can't walk' is a catch cry I have often heard. The logical thought that a sheep who cuts this amount of wool would find it difficult to accomplish such a feat, if it didn't walk, is simply swallowed up and lost in the argument.

With the advent of Sheep Genetics and ASBVs there is now a move towards greater use of objective measurement than ever before but equally it has been met with a steely resolve and contempt from many traditional classers and breeders.

In all my time breeding sheep probably the most illuminating period was the end of the Reserve Price Scheme and the great crash in prices following that event. It was a time of much soul searching and hand wringing but many worthwhile initiatives came from it. I learnt more about our industry during those few years than ever before and probably since.

During those grim years of the early 1990s, when pits were dug on farms to fill with worthless merinos, part of our strategy to climb out of the hole we were in involved buying a half share in a recently established knitwear business and although after 5 years it went the way of many new business startups, it was a very educational experience. We also established direct links with processors, doing our bit to streamline the supply chain. We supported businesses such as Australian Wool Enhancers who were utilising research done by CSIRO to develop a simpler and less costly process of getting wool from the sheeps back to the spinner while guaranteeing the purity of tops produced

We also sold wool directly to German top maker Bremer Woll Kammerei (BWK) retaining 50% equity in combing consignments so we were paid for half of the consignment as greasy and the other half when it was sold as combed tops. The up front greasy payment helped us meet immediate costs (shearing, etc) and then the balance we received later when BWK sold the tops on the spot market. We thought this was a great system as there was a clear incentive for BWK to get the best possible price and we just did what we were good at – growing wool. After doing an historical analysis of the greasy market versus the top market there was a clear margin over and above processing and financing costs when selling wool in this way. I have to mention here an interesting anecdote. When we sent the raw wool to BWK's Geelong top making mill, we did so using the TEAM (Trials Evaluating Additional Measurement) formula developed by CSIRO which meant fleeces, apart from ensuring stain was removed, were pressed unskirted and everything baled together, fleece, locks, bellies, pieces. After processing BWK were very pleased with the standard of the top and complimented me on the quality of the wool consigned. They then asked me to invoice them for 50% of the greasy value as agreed but when they received our bill they phoned me to

say there had been an error – the wool consigned was surely all fleece wool and the value I had put on it was too low! Although I would have been far better off financially to go along with their assumption, honesty prevailed and I told them the consignment included bellies, pieces and locks as well and that was the reason for the valuation. They were as astounded that such high quality tops could be produced in this way and proved to me that tradition and lack of accurate information flow was, and still is, a critical problem in our industry.

Like many producers in the late 1980's and early 1990's, we were very concerned our grand old industry might fail however we were not alone and there were hands across the sea from processors such as BWK (top makers) and Sudwolle (spinners) who thought the drop in production (after the collapse in prices) might spell the end. There were also approaches from clothing manufacturers and retailers who were looking to shore up supply lines through direct contact with growers committed to staying in the industry.

I remember a visit to Hazeldean from the CEO of Johnstons of Elgin - the famous Scottish woollen manufacturers who sell under their own label but also manufacture for high end European labels. They were the first high end woollen manufacturer I had ever spoken to and presented an opportunity to find out whether the stories I had heard over the years (that were now getting even more airplay) were fact or fiction.

At lunch one day I asked the CEO about the impact of sale by objective measurement when it first commenced, particularly on the quality of wool they received. He thought for a while and recounted the old days before sale by measurement. He said in those days they had wool sorters whose job it was to sort through each fleece and split it into various quality gradings. He remembered one of the best men his company employed was completely blind and incredibly good at his job as his loss of sight had made his other senses far more acute. However he finished by saying that once measurement came in, although initially involving some loss of product quality as they transitioned, the quality of their product became far better than it had ever been. In addition, the need to employ wool sorters was no longer necessary and their overall efficiency and throughput speed was greatly enhanced.

On a visit to Italy and Germany shortly after this conversation I asked the same questions of the businessmen who ran spinning mills and top making plants and again their answers were the same. Indeed, one said categorically it was not the Australian woolgrowing bureaucracy pushing for sale by measurement - it was the processing industry. Measurement gave them more certainty and more uniformity so that they could run their modern machinery at higher speeds and reduce down time significantly.

One of the benefits of a family occupying the same house for many years is the collection of various wool industry publications amassed over the years and the other day I came across a copy of the proceedings of the Australian Sheep Classers Association Convention, Dubbo, 1969. It makes very interesting reading and although there was clearly some scepticism of scientists by sheep classers even then, the organizers were far sighted and progressive enough to include many scientists in the list of speakers. At that stage, wool was still being sold by visual appraisal and although testing for fibre diameter and yield was widespread, it was done post sale – not pre sale, as it is now. The then Australian Wool Board was not supportive of sale using 'Scientific Measurement' and stated that any uptake should be delayed. However, the processing industry was marching on and AWTA was testing 1 million bales per annum, with somewhere near a further million tested elsewhere. All done post sale before processing. In other words wool was tested following a request by the wool processor and arranged by the wool buyer after the sale, not before the sale, as is now the case. Demand for measurement was driven by the processor, not the scientific elite in Australia, as is so often alleged.

Finally the AWB relented and sale-by-sample was introduced as an optional marketing method for the 1972-73 season. As we know, the rest is history and now virtually all wool is sold with full measurement details pre sale.

Woolgrowers now receive test results and an appraisal of value from their broker based on measurement. These include fibre diameter, coefficient of variation of fibre diameter, yield, staple length, staple strength and of course weight. There is little argument among woolgrowers that these test results form the fundamental basis of the valuation they receive and ultimately the price paid for their wool.

It begs the most obvious question - why wouldn't you use the same information to help select the rams you buy?

The wool industry changed dramatically in the 20th Century and back in 1969 the bogeyman was synthetic fibres. Synthetic fibres could be produced with accurate and exact specifications and were made and marketed as a measured fibre. This was the world wool was dealing with and for wool to remain competitive processors had to do away with costly labour and lengthy preparation time. Wool sorters had to be abandoned regardless of how good they were at their job. Wool processors demanded wool be able to cope with the vastly increased speeds of their modern spinning machines and measurement was able to deliver far more precise results and less downtime than the old count system where differences of up to 5 microns were often discovered in wool sale lots of the same count or quality number.

The wool industry, both on the production side and the processing side, has benefited enormously from the introduction of measurement. However, it still has some way to go to utilise the full benefits of this technology as well as modern genetic knowledge, molecular science, modern data analysis and data processing and the boost all these bring to the breeding of superior animals.

There will always be the critics, the ones that say that measurement is irrelevant because sheep change with age and in some instances re-rank. These statements are true but regardless of the method used to assess sheep, growers and classers have to deal with these anomalies irrespective of whether they use measurement or not. Traditional classing and common sense will always have a place in our industry and it is a shame those who see developments, such as ASBVs, as threats to our industry, their livelihood or both.

The opportunity to use more information to make better decisions and develop and promote the breeding of better sheep into the future is self evident.

Jim Litchfield

HAZELDEAN
LITCHFIELD

Welcome to Hazeldean

The company's headquarters and home to the Litchfield family, is located at Hazeldean near Cooma in the Monaro district of south-eastern New South Wales. Hazeldean is a family owned and operated business focussing on breeding merinos for the commercial benefit of our own flock and those of our clients.

Stud History

Hazeldean Merino Stud has been run by the Litchfield family for six generations and has grown from its establishment in 1865 by James Litchfield to be one of the largest, most progressive and influential flocks in Australia. It was built on Rambouillet bloodlines with occasional Riverina Peppin infusions. Today around 10,000 ewes are mated annually.

Hazeldean has been using measured performance indicators longer than any other stud in Australia, since 1954, when James Francis Litchfield began to weigh fleeces and select animals according to how much wool they cut and the fineness of the fleece. This is the same information that establishes the price woolgrowers get paid when they sell their wool and is heritable and repeatable.

So for over 60 years, selection has been based on measured fleece value gathered from each ram and ewe produced. Hazeldean was at the helm of using ASBV's and still leads the merino industry with regard to performance recording and technology uptake including the use of genomic data.

About Our Flock

The Hazeldean stud flock includes 3,500 ewes and the commercial ewe flocks totals 9,000. The size of the flock makes it one the biggest single Merino gene resources in Australia.

In addition to its scale, the Hazeldean ewe flock is unique in its depth and consistency of breeding having been under the direction of the one family, the Litchfields of Cooma, since establishment in 1865. The creation of a selection procedure, ongoing now for nearly 50 years, of measured economic value, rather than just aesthetic characteristics, has meant the Hazeldean flock has a consistency of production and commercial worth compounded and entrenched throughout its entire genetic profile. The Hazeldean ewe flock goes through the same stringent assessment process as the rams and every ewe is assessed for its ability to contribute to the overall progress of the stud. This means the diversity in the genetic base is maintained and inbreeding minimized and the full worth of the extensive flock size utilized.

Hazeldean ewes are identified at lamb marking and then following an even up shearing at 8 months, are run through until 17 months when they are individually classed, scanned and hip sampled prior to shearing and fleece weighing.

Following the return of processed performance data including pedigree information and adjustments, ewes are inspected off shears, culled for structural faults and allocated to a stud category dependent on their original classing score, performance data and final inspection.

Surplus and cast for age ewes are available from each of Hazeldean's breeding locations.

Hazeldean rams are well acclimatized and adapted to most areas of Australia as has been proven through independent bloodline trials. Hazeldean Merino blood rams, ewes and wethers have been

HAZELDEAN
LITCHFIELD

independently assessed more than any other stud in Australia, entering Sire Evaluations, along with clients entering ewe and wether trials, benchmarking their flocks against other bloodlines. Hazeldean bloodline over many, many years consistently perform at the top of these trials.

The Hazeldean Breeding Policy

The special treatment of small groups through shedding and provision of artificial rations is at odds to the philosophy of the Stud. To give accurate and meaningful measurement information, it is necessary to evaluate animals by running them in large contemporary groups under conditions equivalent to those experienced in the world of commercial wool growing. Hazeldean therefore runs its stud operations along the lines of a commercial growing and breeding enterprise.

Hazeldean bases its selection decisions and grading for sale on a measurement system that has been in place for many years. Measurement, when applied with common sense, significantly improves the accuracy of selecting for heritable traits of economic importance.

Animal Health

Hazeldean Merinos are accredited free of Brucellosis and monitored negative stage 3 (MN3) for Ovine Johnes disease. We also do a full pre sale fertility assessment, see letter from Dr Tom Graham for details over page.

**Although Hazeldean employs best practice procedures in livestock husbandry and does its best to ensure every animal catalogued for sale is free from disease, internal parasites and external parasites, it does not guarantee that any sale animal is free of disease, internal parasites or external parasites.*

Pre-sale ram fertility assessment

Dear Hazeldean team,

Please see below a letter from Coolac Veterinary Services to use as you like for your upcoming sale.

On the 11th October we will be doing one final assessment of the Hazeldean ram group. The goal of this is to provide a pre-sale fertility assessment of individual rams, so that their clients can be confident that rams purchased should be fertile, functional and ready to work. To our knowledge the protocol undertaken is leading the sheep seedstock industry in doing more rigorous fertility assessments as a baseline for all rams pre-sale.

Each ram is examined for several fertility traits, which have all been recorded with the rams individual ID and are available to buyers if needed. These traits include scrotal circumference, testicle tone and palpation of structures associated with the testicle, penis examination (which in general has not been practiced by industry to date), teeth assessment including jaw alignment, and leg and feet assessments.

Fertility assessment is a single point in time activity. The vendor has performed current industry gold standard to provide rams that are ready to work. However, we strongly advise that once the ram is home and settled it is wise to check them before their first joining and EVERY year 6-8 weeks pre-joining. A lot of work is expected of rams and their functionality is paramount to your flock's fertility. They are a high value animal, but only if they are in working order. Please don't let them get over-fat, aim to keep them in body condition score 3, look after their feet, practice good biosecurity, be aware of Brucellosis risks and have an accredited veterinarian assess their reproductive potential each year so that EFFECTIVE rams are being put to work.

Please feel free to call with any questions of if further information is required.

Regards, Tom and Simon

Thomas Graham

VSB registration #9050
National Cattle Pregnancy Diagnosis Scheme #1224
Brucellosis accredited.

HAZELDEAN
LITCHFIELD

Visual scores and Structural Evaluation

Allan Casey, an experienced sheep classer who has performed structural scoring within many sire evaluations independently classed all rams prior to sale and allocated visual trait scores based on the following information.

The scores recorded are as described in the Australian sheep standard for visual traits, as shown in the “visual-sheep-scores-producer-version-2019” booklet.

These scores are analysed and reported by Sheep Genetics.

1. WOOL COLOUR (COL) Definition: Wool colour describes the intensity of whiteness and yellowness of greasy wool. Traits are scored 1 to 5. Ideal scores are 1 to 2.

Wool colour (COL)

2. WOOL CHARACTER (CHAR) Definition: Wool character describes the definition of crimp, in terms of both evenness and depth. Traits are scored 1 to 5. Ideal scores are 1 to 2.

Wool character (CHAR)

HAZELDEAN
LITCHFIELD

3. LEGS/FEET (LEGS) Reported in this catalogue as three traits.

Definition: Legs/Feet is a combined trait. It refers to the overall soundness of the front and back leg and feet structure and in particular the orientation of the legs and feet and angulation of the hocks and pasterns in relation to the feet. The back leg structure is scored as the sheep is walking away from the assessor.

- 3. (i) Back legs (often described as Hocks). Ideal scores are 1 to 1.5
- 3. (ii) Front feet/legs. Ideal scores are 1 to 2
- 3. (iii) Back feet. Ideal scores are 1 to 1.5

LEGS/FEET (LEGS)

BREECH WRINKLE - LAMBS (BRWR)

Breech wrinkle scores were taken at marking in 2020.

Definition: Breech wrinkle refers to the degree of wrinkle at the tail set, sides of the tail (bat wings), adjacent to the anus/vulva and down the hind legs.

Explanation of Terms Used

Australian Sheep Breeding Values (ASBVs)

ASBVs describe the expected performance of a ram's progeny. Although actual measurements of fleece weight, fibre diameter etc. are a good guide to the performance of the ram's progeny, adding the measurements and genomics of relatives to the calculation allows the likely breeding value of the ram to be more accurately represented.

An ASBV may be different to the animal's actual performance that is a combination of both genetic and environmental influences.

There are ASBVs for many different traits that impact the performance and profitability of sheep enterprises. ASBVs are generated from the data, pedigree and genomic information collected by Sheep Genetics members to provide a prediction of genetic merit. Breeding values are estimated like this because thousands of genes, most having only a small genetic effect, control most traits.

WT (kg) - Animals with a more positive ASBV for weight (WT) will produce lambs that grow faster and therefore reach target weights in a shorter period of time.

CFW (%) – Rams with a higher clean fleece weight (CFW) will produce progeny that cut more wool. A ram with an ASBV of 30% will produce progeny that cut 15% more wool than the progeny of a ram with an ASBV of 0.

FD (m) – Lower negative fibre diameter (FD) ASBVs are generally desirable. A ram that has an ASBV of -2.0 will produce progeny that are genetically 1.0 micron finer than a ram with an ASBV of 0.

FDCV (%) – Animals with lower fibre diameter coefficient of variation (FDCV) ASBVs will genetically have a lower variation in fibre diameter. A lower CV% is often associated with higher staple strength, therefore sheep with a small variation about the average are described as having “a good CV”. CV is also important as wool can be spun into a finer yarn if it has a low CV.

Accuracy is represented as a percentage and is a reflection of the amount of effective information that is available to calculate the ASBV. All ASBVs are now published with accuracies. The higher the percentage, the closer the ASBV is to the true breeding value of the animal.

NOTE: An ASBV of 0 is the average of the 1990 drop. It is important to compare ASBVs against current industry average.

What are indexes?

Indexes combine important production traits into one number and are a useful way to rank animals quickly and easily.

Indexes are created by putting a weighting on each trait depending on how important they are. The breeding value of each animal is multiplied by this weighting to create one number.

Using indexes to select animals ensures balanced genetic progress is made towards a more profitable sheep production system. A ram with a higher index will produce progeny that are more profitable in that production system.

Below are three key steps for using indexes in purchasing decisions:

1. Rank animals on your chosen index
2. Consider the individual ASBVs which are important in your breeding objective to short list animals
3. Make sure those animals meet your structural and type requirements.

Fibre Production (FP) and Fibre Production Plus (FP+) The FP and FP+ indexes are for a self-replacing Merino flock where the majority of income is from the wool clip. As this production system is commonly used in high rainfall zones where internal parasites cause significant economic losses, worm egg count is included in the FP+ index. Reproduction and staple strength are also included in the FP+ index.

Merino Production (MP) and Merino Production Plus (MP+) The MP and MP+ indexes are for a self-replacing Merino flock where the income is a combination of wool and surplus Merino sheep sales. Improvement of wool income is focused on a balance of increasing fleece weight and reducing fibre diameter, with a small degree of emphasis on maintaining or slightly increasing staple strength in the MP+ index.

Dual Purpose (DP) and Dual Purpose Plus (DP+) The DP and DP+ indexes are for self-replacing Merino flocks whose majority of sheep income comes from sheep sales. It is for self-replacing merino flocks that do not keep their wethers and join a portion of their ewes to terminal sires to generate crossbred lambs for meat production. This means that there is increased emphasis on growth, carcass performance, and reproduction to capitalise on the high value of lambs and to ensure that flock size is sustainable while joining to terminal sires. Wool production is still important, but the balance is on increasing fleece weight while trying to limit change in fibre diameter and staple strength.

Allflex[®]
Livestock Intelligence™

DNA SAMPLING SIMPLIFIED

- Easiest way to collect a quality sample
- Vials fit in standard lab well plate (96 vials)
- Efficient and cost effective
- Get the answers you need for key production traits

TISSUE SAMPLING UNIT

"The Allflex TSUs have been a real game changer. We're able to take the DNA samples more efficiently and have the peace of mind we're getting a quality sample to the lab so we get accurate genetic reports."

Directions to Hazeldean from Cooma

If you are entering Cooma from the Canberra (Eastern) end turn left at the first roundabout in the centre of town by the park. If entering from the Jindabyne (Western) it will be a right turn at the second roundabout. Follow this street, Bombala St, (also the Snowy Mountains Highway to Bega and the South Coast) until you reach a bridge over the Cooma Creek on the outskirts of town. Turn right just before the bridge. The sign says Bobundara 34 and also Church Rd.

Follow this road exactly 14kms from the turn and the Hazeldean mailbox and entrance is on the right - about 1 km past the only bridge you cross on the Bobundara Rd.

Airports

Hazeldean is located 1.5 hours' drive south of Canberra near Cooma. There are daily flights from all Capital cities to Canberra airport. Hazeldean is 20 minutes from the Snowy Mountains/Cooma Airport which is all weather and has lights. For privately chartered aircraft please contact 02 6452 5999 for more details.

Where to stay

Nebula Motel
42 Bombala Street
02 4552 4133

Altair Motel
192 Sharp Street
02 6452 1211

White Manor Motel
252 Sharp Street
